Chainmail Ring Aspect Ratio Calculator is a handy and reliable program designed to assist in calculations for chainmail jewelry. It can calculate the aspect ratio based on the ring's diameter or it can computer the inner / wire diameter based on the aspect ratio. Provides infinite input options. Labels can be used to mark the size of rings of a particular thickness from a particular type or grade of chain. Backup option, that makes changes to the original file non-permanent. Useful in creating ring patterns for yourself or for resizing rings from other programs or websites. 1. The app needs to be constantly updating with the latest ring sizes, collar links, etc. 2. It is not easy to edit graphs or tables, so please use the backup function to generate the right pictures, then delete them from the folder. Chainmail Ring Aspect Ratio Calculator is a reliable program that will assist you in calculating the aspect ratio for a chainmail ring based on the diameter of the ring. You just need to choose an aspect ratio and then the program will calculate the inner diameter for the ring based on the aspect ratio you have chosen. It can also be used in calculating the wire or inner diameter of the ring based on the aspect ratio (inner diameter / wire diameter) and calculate the outer diameter. The adjustable of the inner diameter/wire diameter ratio and the outer diameter of the ring can be done via the program's dialog box, which will make it easier than memorizing a number while connecting ring's end sections. You can also use the program to compare rings made from different materials and calculate the aspect ratio of the rings you own. The program has a list of materials with known AR. A can be easily filled in with the material a ring is made of, and then an analysis of the ring can be done. It supports the Measurement Unit system based on the International System of Units (SI). Chainmail Ring Aspect Ratio Calculator supported units: inch, mm, millimetre, yard, inch, cubit, feet, steradians, radian, Acceleration - Time Acceleration - Space Galaxy - Time Galaxy - Space Galaxy - Time Version History - Chainmail Ring Aspect Ratio Calculator : Version 3.2 Beta (2009.03.10): Minor bug fixes. What's New In Chainmail Ring Aspect Ratio Calculator?

Estimating the size of a Chainmail ring is an art in itself as you will have 1. To estimate the ring size, start with a ring that is approximately circular. Step 1: The approximate diameter of the ring is given as the two outer diameters of the ring. Step 2: The ring is cut in half through the wire(s). Step 3: Then measure the width of the ring at the wire(s). Step 4: Measure the width of the ring at the cut wire(s) 2. Step 5: Estimate the ring size by subtracting the wire thickness from the cut wire(s) thickness Use appropriate chain mail size as the medium size. Step 6: Use the percentage value for the larger cut wire(s) as the aspect ratio Value of 1.2 is a reasonable value for a chainmail ring 3. With the aspect ratio, calculate the inner diameter of the ring using the following formula: Ring diameter = 2 x (1+aspect ratio) x (1-aspect ratio) 4. If you prefer to enter the ring size manually, for input purposes use Diameter = DD 5. Adjust the coefficient "1+aspect ratio" to the desired diameter. 6. Calculate the ring's Wire Diameter using the formula: Ring diameter = 2 x 1.2 x (1-aspect ratio) If you prefer, change the coefficient of 1.2 to a smaller value. 7. The size number in most jewelry stores is based on the wire thickness. The chainmail ring size number is nearly twice the wire thickness. The chainmail ring gauge (number) is based on the inner diameter. Reminder It is not absolutely necessary to use the actual wire thickness in chain mail calculations. The suggested sizes for chainmail ring can also be used for circular ring settings. Ring size conversion: When you are comparing different ring sizes, use the following conversion chart for the wire thickness: Ring size wire thickness approximate ring size 0.7 - 1.7 mm 3.5 - 5.5 mm 6 - 8 mm 1.7 - 2.7 mm 5.5 - 7.5 mm
